FARO®
AMETEK®

**Sphere &
Stream**

**Capture With
Confidence
and Connect
Your World
Faster**

Designed for Complete Integration

FARO's complementary products — **FARO Sphere** and **FARO Stream** (which serves as the data bridge between Focus Premium and Sphere) — create a powerful union of three distinct technologies, enabling users to capture with confidence and connect their world anytime, anywhere. This reduces time to decision while streamlining workflow tasks, meeting the demands of today's increasingly remote, digital workforce.

Stream

Stream is the first mobile app that connects FARO hardware with FARO Sphere cloud-based applications and services. By uniting hardware with cloud software, Stream makes on-site capture workflows more efficient and brings captured data directly into the FARO ecosystem. It does so by providing live feedback of the captured scans while performing its pre-registration function.

Stream provides the best on-site efficiency for data capture with the Focus Premium scanner for scan operations in architecture, engineering, construction and facility management. Now, users can be confident in the successful and complete scan data they collect in real-time, confident that no additional site visits will be required because of missing data and confident in radically expedited project finalization times as Stream and Sphere are already doing some of the work automatically while a Focus Premium operator is returning from the field. Premium also allows the ability to include complementary data like field annotations and photographic images to the project after a scan is complete.

Stream integrates the captured data seamlessly into Sphere, and provides full FARO solution and application compatibility.

What sets Focus Premium apart is its ability to share the on-site data it collects via Stream and send that information to Sphere. Once data is on Sphere users experience a centralized, efficient, and collaborative environment across FARO point cloud applications and customer support tools for faster 3D data capture, processing, and delivery through a secure,

single point sign-on process. With Stream and Sphere, registration starts in the field and processing is performed in the cloud while the scan operator is driving back to the office. This allows off-site colleagues to already work on the data or share it with end-customers via FARO WebShare Software, the world's leading collaborative point cloud project management solution.

Additionally, Sphere leverages WebShare to integrate three customer service platforms: Knowledge Base, which provides technical product information, FARO Support, which provides 24-7 personalized service, and FARO Academy, which provides on-demand and live training and education programs.

A Workflow Wiz

Whether it's for Building Information Modeling (BIM), industrial facility management and infrastructure projects, or improved construction quality control, historic preservation and the sending of scan data for digital twinning for asset and facility management, the new Focus, paired with Sphere, via Stream, enables enhanced workflow efficiencies that will drive business success.

Sharing data seamlessly — and securely — through the cloud, wherever a Focus Premium operator is located is what sets this suite of complementary products apart. **Contact your local sales representative or visit FARO.com to learn more.**

With Focus Premium, Sphere and Stream working as partner products, your 3D laser scanning potential has never been more robust.
